PROFILE

A developer who build tools with JavaScript, TypeScript & REST. More than 5 years hands-on experience with Angular and it's popular libraries. Has experience with NPM projects and JS on the server side with Node. Knows how to deal with a Linux box and has a good understanding of IT jargon. Likes to work in the office with his colleagues and never says no to a team building event. Loves hiking and beautiful sights.

SKILLS

— Intermediate English
— Angular 2+ Framework
— NPM & TypeScript
— "Thinks" in the browser
— Clean Code
— People skills

STRENGTHS

Knows Angular, Angular Material and PrimeNG with it's quirks. Not afraid to use English on a daily basis. Can handle CLI tools with weird switches and all that.

TECHNOLOGIES

— Angular
— Angular Material
— PrimeNG
— JavaScript
— TypeScript
— NativeScript
— MongoDB
— Cypress
— Jest
— Docker
— Python

CAREER

— Freelance Angular Developer (2021 - Present Day)
— Angular Developer (2021 - 2021) — Splendex
— Frontend Developer (2016 - 2021) — Codecool
— Freelance Web Developer, Affiliate Marketer (2012 - 2015)
— Customer Support Representative (2010 - 2012) — Vodafone

EDUCATION

— Junior Developer (2015 - 2016) — Codecool
— Library Information Science / BSc (2006 - 2010) — Nyíregyháza

LANGUAGES

Hungarian — Native

English — Intermediate

PROJECTS I'VE BEEN WORKING ON

Application System
The frontend site for the recruitment process for a well known programmer bootcamp, with an internal tool baked in for the recruitment team as well.

Resume generator microservice
A node project that can build this CV that you're holding right now. Feed in a single file and run a command. Maintaining my CV is easier than ever!

Student Registry Platforms
I've built a huge chunk of the UI of the internal student registry platforms at my previous employer. With the help of these tools end users could manage students, their lifecycle, create, add and remove their details or even generate education contracts for them. The team used Angular, several of it's most popular libraries and Spring Boot as a backend to put together these projects.

Simple React To-Do
When I started tinkering with React I put together this small project just to get the hang of the library. It's not much indeed but it was a huge help for me to understand the basics of how React works.

Memory Game
Once I had to write a memory game to prove my Angular skills to an employer. This is what I came up with within 5 hours. I have no intentions to make the repository public on this one, but if you are interested please let me know.

Business Landing Page
This project took a few hours to put together and it's been doing great what it's meant for. No frameworks, just some HTML and CSS. Sometimes there is no need to over engineer things!

Yet another Business Page
I built this site entirely on my own for one of my clients from scratch. The design and implementation was my job. Powered by Angular Universal it's SEO friendly and being served from the cloud.

Twitter Auto Tweeter
It happens when you want to post to Twitter every once in a while. Well, I built a tool for that with npm, TypeScript and some 3rd party dependencies. This project also helped me to understand how OAuth works.
